

Butsko Utility Design an NV5 Company

The Single Source for All Your Dry Utility Needs

SERVICES AVAILABLE

- Utility Due Diligence & Cost Estimating
- Utility Environmental Reports
- Utility Planning & Management
- Utility Construction Coordination
- Applicant Design (Gas & Electric)
- Communication System Design
- Lighting Services
- Conceptual Composite Exhibit
- Composite Exhibit
- Asset Management Skills
- Aerial Services

Butsko Utility Design an NV5 Company (Butsko) is committed to being a leader in planning, consulting and engineering services within the utility and energy industries. We are dedicated to public and private sector client satisfaction while establishing long-term relationships by providing technical expertise, project control, measurable results, and value.

Butsko is the single source for all of your dry utility - electrical, telephone, cable television, fiber optics and natural gas - planning, management, design and engineering needs.

By focusing on what our clients want and need - quality service, communication and performance.

WHY BUTSKO

- Thorough understanding of rules issued by the California Public Utilities Commission (CPUC), and administered by other out of state regulated and non-regulated utility companies.
- Knowledge of the utility company's design standards, work order processes, and construction installation and energizing process.
- Positive working relationship with the local utility companies at all levels.
- Proactive and creative in our approach to find opportunities to reduce expenses, shorten process timeframes, and avoid unnecessary client responsibilities.
- Butsko's project management team is excellent in proactively communicating with all project team members.
- Butsko prides itself in helping our clients and associates to formulate project goals, thereby working diligently with the multifaceted teams to assess and attain successful solutions.

Butsko has established a prominent position as a leader in the utility industry.

Since 1994, Butsko has effectively contributed our skills to projects of all types, sizes and geographic regions. These projects include master planned communities, municipal improvement projects, commercial and industrial centers, residential subdivisions and developments, electric substation site design, golf courses and redevelopment projects throughout California and the western states.

Land Development

Utility Due Diligence & Cost Estimating

Identifying the utility related issues, as a part of a site acquisition proforma, land use planning or tentative map preparation is critical in determining how the project can be best utilized. Understanding the potential conflicts that may occur between existing utility systems and proposed project improvements in the early stages of the project will help you to determine what should be anticipated. Butsko is experienced in site due diligence by regularly performing these site studies on a weekly basis for lenders, utility companies, municipalities, developers and engineer/land planners. Butsko's utility research includes: obtaining utility company as-builts/facility maps, conducting interviews with key utility company staff and field verifying the site conditions.

Accurately determining the magnitude of the utility related costs is essential to the financial success of a project. By utilizing Butsko's site due diligence information, Butsko can perform cost estimates ranging from comprehensive and detailed to order of magnitude and ballpark. Cost estimating your utility company charges (refundable, non-refundable/taxable), contractor costs (contractor provided material) and facility relocation costs will only be as accurate as your familiarity of the CPUC or utility company rate applications, design methodologies and construction standards. Butsko has extensive work experience with local regulated and non-regulated utility companies. Butsko's knowledge of each utility provides us with a good foundation to accurately determine utility and applicant responsibilities and the related costs.

Utility Environmental Impact Reports

When faced with the complex task of reviewing dry utility issues and how they relate to the potential environmental challenges for each development, Butsko is uniquely qualified to answer these questions for clients during the Environmental Impact Report (EIR) stage of development. Every Butsko dry utility study thoroughly covers the complex research needed to complete the EIR including: calculating gas and electric load studies, determining locations of existing dry utilities near each project, researching regional gas and electric transmission/generation infrastructure and investigating California electric industry de-regulation and preparing a site exhibit. Finally, Butsko will respond to the EIR team questions, meet with utility representatives, and prepare the final technical report.

Utility Planning & Management

The management and coordination of the utility planning and design process can be complicated and a difficult task. This process usually involves coordinating between each project team member (consultants, contractors, project management, construction management, sales and marketing). By effectively communicating activities and managing tasks, schedules are more likely to be maintained and financial budgets met. Butsko has an internal project management team to ensure clear and timely communication and project control. Butsko's team consists of a Principal-In-Charge, Project Manager/Designer and Project Coordinator. Client representation and advocacy is a priority for the Butsko team throughout the life of a project.

Utility Construction Coordination

Ranging from shared construction responsibilities to turnkey utility installations, Butsko offers its' clients a full range of construction services through its strategic alliances with highly experienced, qualified installers of dry utility systems. Options can range from bid quantities and contractor procurement and utility installation and energizing coordination. By combining the design and construction options and services, better control over the entire utility system process can be achieved.

Design & Engineering Services

Applicant Design (Electric & Gas)

Butsko has established itself as a leader in utility designs as an active participant working with the CPUC implementation of electric and gas "Applicant Design" since January 1996. Butsko has successfully performed more applicant design projects than any other design/engineering firm in California. Applicant Designs are approved by the CPUC as a "permanent" option to help meet the needs of the building industry by providing flexibility, choice and control over the planning and design process.

Communication System Design

Butsko has extensive experience in telecommunications design, working for local service providers and designing master planned communities' communications system infrastructure requirements.

Lighting Services

Butsko's Lighting Services Division is energy and nighttime sky conscious while providing lighting design and engineering services. Butsko's lighting design experience includes, but is not limited to, public and private streets, parking lots, parks and entertainment projects. Working closely with Butsko's staff provides for better coordination in identifying electrical service points for street lights and/ or meter pedestal locations. Butsko's continued relationship with the client and landscape architects help to establish a clean, coordinated lighting project.

Conceptual Composite Exhibits

With today's projects becoming ever complex, Butsko's concept utility composite exhibits help to consolidate multiple engineering disciplines into a single reference to easily identify potential conflicts early in the project.

Composite Exhibit

With today's projects becoming ever complex, Butsko dry utility composite exhibits help to consolidate multiple engineering disciplines into a single reference exhibit for Butsko's clients, their contractors and other team members. A dry utility composite is a great tool to easily identify potential conflicts early in the project. Working closely with civil engineers, landscape architects and consultants, Butsko's dry utility composite exhibits can be regularly updated to reflect the project's most accurate and up to date plans.

Asset Management Skills

The Butsko Utility Design, Inc. Northwest Office have many years of practical Utility experience which lends itself to assisting with overhead equipment condition assessments (poles, guying, overhead transformers, overhead switches, primary, and secondary overhead wires, tree issues, potential code issues).

Similarly our Northwest staff is experienced with assessments of underground equipment and systems such as the primary or secondary conduits with cables on poles, vaults, pads, manholes, handholes. Other underground equipment includes: submersible transformers, pad mount transformers, auto transformers, primary and secondary underground cables, and underground switches.

Butsko's staff offers the ability to catalog, identify and assess the utility equipment and provide accurate records of the specific utility equipment.

Butsko-Key Personnel

Gregg A. Butsko - President

Gregg is Butsko Utility Design, Inc.'s President and has over 30 years of utility planning and design experience. Gregg currently serves as a Public Utilities and Energy Representative for the BIA of Southern California and member of the CBIA Public Utilities, Codes and Energy Committees. Prior to forming Butsko Utility Design, Inc. in 1994, Gregg was Vice President at Utility Specialists, Inc. where he spent ten years managing the firm's Southern California division. Gregg oversees all Butsko Utility Design, Inc.'s operations and has direct project involvement.

Dave Pettersen - Senior Vice President

Dave's 32 years of experience in the utility industry include representing San Diego, Gas & Electric (SDG&E) on regulatory and legislative issues as a Project Principal and Project Management Supervisor. He has expertise in tariff and rate applications, California Public Utilities Commission proceedings and non-regulated utility projects. In addition, he has extensive experience in gas and electric system design, construction and management. Dave oversees Butsko's Southern California Region and is located in the Murrieta office.

Patrick Gorgas - Vice President

Patrick joined Butsko 1998 and possesses a diverse skill base from his 32 years of energy and telecommunication systems design and construction. Patrick began his career as a Navy Seabee, where he was trained in electrical theory, power generation/distribution and communications. He then took these skills to San Diego Gas & Electric, where he was a designer and planner; he has also worked at Pacific Bell as a maintenance splicer. Patrick's broad experience allows him to demonstrate significant corporate leadership and cross-functional business expertise.

Ashok Nayudu - Northwest Region Manager

Ashok has a Degree in Electrical Engineering (BSEE -1972) from the University of Washington. Ashok joined Butsko in 2003 after retiring with over 29 years of utility experience at Seattle City Light. His background includes over 19 years of overhead distribution and transmission design and underground facilities design, knowledge of NESC and Utility Standards, as well as 10 years of Municipal Electric Utility Management. Ashok is a member of the Institute of Electrical & Electronics Engineers.

Butsko-Key Personnel

Eddie Pablos - Region Manager

Eddie Joined Butsko in 2002, having six years of previous project management experience acquired while working as and Outside Plant Engineer for Pacific Bell and as a Project Manager for a private telecommunication services provider. While at Pacific Bell as a Design Engineer, Eddie worked with various external organizations including developers, municipalities, and Caltrans. His 20+ years of experience of technical expertise, customer service, and project management skills enable him to provide quality customer service to Butsko's clients. While Eddie manages many projects throughout Southern California his project concentration and expertise is in the desert area.

Joel Radovan - Region Manager

Joel joined Butsko in 1999 bringing 11 years of Mapping, Records, Engineering and a broad range of utility industry experience gained at San Diego Gas & Electric (SDG&E). Since joining Butsko, Joel has diligently managed projects throughout San Diego, Los Angeles, Orange, and Riverside Counties. He is heavily involved in teaching skills and strategies for promoting effective team performance among colleagues. Joel is a key member of both our Design and Project Management teams. With Joel's unique combination of technical and project management skills, he has become an integral part of our quality assurance program(s). He regularly assists on quality control peer reviews on SDG&E & Edison applicant designs.

Dave Ramirez - Region Manager

Dave joined Butsko Utility Design, Inc. in 2001 bringing engineering and project management experience he gained while working at Pacific Bell as a Construction and Engineering Manager. While at Pacific Bell, he was responsible for the design and construction of telecommunication systems for residential and commercial developments. Dave's over 20 years of management experience as well as his extensive dealings with various developers and municipalities affords him the skills necessary to effectively and efficiently manage many different projects. Dave manages many projects throughout Southern California however, his concentration is on the challenging multi-family and mixed-use developments in the Los Angeles area.
